

FINDING THE RIGHT WORDS

The University of Sussex is seeking participants for a research study investigating how our ability to find words under pressure changes with age.

Our speech may be a valuable indicator of the health of our brains. This study first seeks to understand how it changes in healthy ageing. Our results will feed into a large project seeking to understand how language changes in very early dementia, and whether it can predict changes to our brain health over time.

If you...

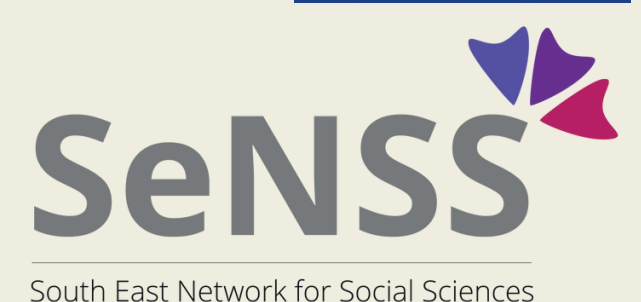

- Are an adult aged 20-35, 40-60, or 65-80 years
- Fluent English speaker
- Without any diagnosed neurological conditions affecting language

then you are qualified to participate in our study!
The study involves ...

- A 30-minute online session via Zoom
- Engaging verbal tasks and questionnaires
- Strict confidentiality of all responses

Contribute to groundbreaking dementia research from the comfort of your own home!

Reimbursement provided for your time.
